EVOLUTION

INTERNATIONAL JOURNAL OF ORGANIC EVOLUTION

PUBLISHED BY

THE SOCIETY FOR THE STUDY OF EVOLUTION

Vol. 48 **Subject Index** **1994**

Evolution, 48(6), 1994, pp. 2053–2065

AMPHIBIANS

Acipenser, Actinopterygii, developmental evolution, sturgeon, *Taricha*, 2035

Ambystoma maculatum, historical patterns of gene flow, intraspecific sequence divergence, mitochondrial DNA, Pleistocene glaciation, restriction-site analysis, spotted salamander, 597

amphibian, Anura, *Hyla versicolor* complex, mitochondrial DNA, polyploidy, speciation, tree frogs, 898

amphibian, development, environmental heterogeneity, food, genetic variation, growth, phenotypic plasticity, reaction norm, *Scaphiopus*, temperature, toads, trade-off, 1773

amphibians, animal reproduction, fitness, life history, quantitative genetics, sexual selection, 1286

Anura, growth, intraspecific competition, kinship, metamorphosis, *Rana cascadae*, 1383

biogeography, *Ensatina eschsholtzii*, gene flow, multidimensional scaling, phylogenetics, proteins, ring species, speciation, taxonomy, 876

bottlenecks, cytoplasmic variation, kin-structured colonization, migration, nuclear variation, salamanders, 1114

interspecific interference, Plethodontidae, reproduction, salamanders, sympatry, 921

ARACHNIDS

copulation, courtship, cryptic female choice, insects, intrageneric variation, sexual selection, spiders, 711

Cordylochernes scorpiodes, lactate dehydrogenase, population divergence, postzygotic isolation, prezygotic isolation, pseudoscorpion, sexual selection, speciation, spermatophore, 1168

spectral properties, spiders, spider silks, 287

BACTERIA

acclimation, adaptation, bacteria, *Escherichia coli*, fitness, temperature, variable environments, 1222

Bacillus mycoides, bacterial taxonomy, biochemical tests, multilocus enzyme electrophoresis, population genetics, restriction-fragment-length polymorphism, sibling species, 1698

Bacillus subtilis, compensatory evolution, fitness, mutation, pleiotropy, resistance, rifampicin, 81

Bacillus thuringiensis, fitness, *Plutella xylostella*, resistance, 197

bacteria, bacteriophage, host-parasite coevolution, immunity, resistance, virulence, 1470

cytoplasmic incompatibility, *Drosophila simulans*, host-parasite coevolution, modifier evolution, *Wolbachia*, 1500

fecundity, hosts, incompatibility, sterilization, *Wolbachia*, 909

BEHAVIOR

acclimatization, *Daphnia pulicaria*, habitat selection, heritability, niche polymorphisms, 1324

aggression, heterozygosity, *Microtus pennsylvanicus*, population cycles, voles, 1350

ants, eusociality, genetic variation, Hymenoptera, polyandry, polygyny, social insects, 694

ants, queen-worker conflict, relatedness asymmetry, sex ratio, sociality, 1121

assortative mating, grasshopper, mate recognition, mating signals, morphology, population divergence, 1202

Asterias, bilateral symmetry, cephalization, *Echinometra*, *Heterocentrotus*, irregular echinoids, locomotor anterior, radial symmetry, regular echinoids, test, 1130

bees, eusociality, *Exoneura bicolor*, local fitness enhancement, relatedness, social evolution, social insects, 1684

behavior, brain, distance matrices, double-permutation test, evolution, Mantel test, marsupials, multiple regression, permutation test, triple-permutation test, 1487

chaffinches, cultural evolution, memetic differentiation, song, 351

copulation, courtship, cryptic female choice, insects, intrageneric variation, sexual selection, spiders, 711

divergence, hybrid fitness, premating isolation, reinforcement, reproductive character displacement, secondary contact, sexual selection, speciation, 1451

Drosophila melanogaster, heritable variation, mating discrimination, mating speed, sexual selection, 112

epistasis, interdemic selection, migration, population structure, shifting balance, 69

extrapair paternity, female choice, polygyny, sexual dichromatism, sexual selection, sperm competition, 1089

foraging cost, handicap principle, *Hirundo rustica*, mate choice, reliable signaling, sexual selection, tail ornament, 1676

handicap principle, mate choice, runaway, sexual characters, sexual selection, 853

lekking, lek size, manakins, phylogenetic analysis, social behavior, 1657

sexual imprinting, sexual selection, speciation, 477

Biogeography
adaptation, *Anolis*, constraint, ecological morphology, lizard, niche, specialization, 1786
allopatry, dispersal, distributional overlap, peripheral isolation, phylogeny, sympatry, vicariance, 490
allopolyploidy, *Asplenium*, colonization, Hawaii, long-distance dispersal, speciation, 1364
allozymes, Australia, *Daphnia*, dispersal, founder effects, hybridization, speciation, zooplankton, 1333
Amazon Basin, arboreal spiny rat, cytochrome *b*, *Mesomys*, mitochondrial DNA, haplotype, phylogeography, river barriers, 1314
Ambystoma maculatum, historical patterns of gene flow, intraspecific sequence divergence, mitochondrial DNA, Pleistocene glaciation, restriction-site analysis, spotted salamander, 597
angiosperms, diversification, geographical distribution, growth form, life-history flexibility, pollination, seed dispersal, speciation rate, species richness, 1619
assortative mating, chloroplast DNA, cytonuclear, disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1946
biogeography, *Cryptobranchus*, molecular evolution, phylogeny, 1799
biogeography, cytochrome *b*, *Gasterosteus aculeatus*, mitochondrial-DNA sequences, molecular phylogeny, Pleistocene refugia, polymerase chain reaction, substitution rate, 608
biogeography, *Ensatina eschsholtzii*, gene flow, multidimensional scaling, phylogenetics, proteins, ring species, speciation, taxonomy, 876
biogeography, marine turtles, mtDNA, phylogeography, 1820
bird, Caribbean region, *Coereba flaveola*, genetic divergence, genetic diversity, historical biogeography, mtDNA, RFLP, West Indies, 1041
bird, Caribbean region, *Dendroica petechia*, island biogeography, mitochondrial DNA, phylogeny, West Indies, 1914
chaffinches, cultural evolution, memetic differentiation, song, 351
chromosomal evolution, cytochrome-*b* gene, mitochondrial DNA, phylogeny, phylogeography, Robertsonian fusion, *Sorex araneus* group, 623
coral, fragmentation, genetic subdivision, larval dispersal, philopatry, *Seriatopera hystrix*, sexual reproduction, 1183
cytochrome *b*, cytochrome oxidase, direct sequencing, dispersal biogeography, *Gallotia* lizards, island colonization, mitochondrial DNA, nuclear DNA, PCR, RAPD, restriction-fragment-length polymorphisms, 12s rRNA, 230
developmental noise, quantitative-genetic model, selection, 1478
F_{ST}, F_{IS}, gene flow, grass shrimp, hybrid zone, linkage disequilibrium, mitochondrial DNA, *Palaemonetes kadiakensis*, protein electrophoresis, ribosomal DNA, 376
gene flow, hierarchical genetic structure, Lasioampidae, Lepidoptera, *Malacosoma americanum*, private alleles, tent caterpillars, Wright's *F*-statistics, 1158
geographic variation, hybridization, phylogeography, speciation, species limits, 96
historical biogeography, intraspecific phylogeography, mitochondrial DNA, *Odocoileus virginianus*, white-tailed deer, 122

Birds
Acrocephalus arundinaceus, band sharing, DNA fingerprinting, great reed warbler, hatching failure, nonincestuous inbreeding, population bottleneck, reproductive success, 317
Agelaius, blackbird evolution, comparative approach, cytochrome *b*, DNA sequencing, monophyly, phylogenetic, polymerase chain reaction, 679
Agelaius phoeniceus, natural selection, overwinter mortality, red-winged blackbird, sexual size dimorphism, 1071
allometry, Darwin's finches, evolutionary potential, genetic constraints, genetic correlations, heritabilities, hybridization, mutation-selection balance, polygenic variation, 297
altricial birds, clutch size, comparative study, life-history variation, nestling growth rates, 1397
bird, Caribbean region, *Coereba flaveola*, genetic divergence, genetic diversity, historical biogeography, mtDNA, RFLP, West Indies, 1041
bird, Caribbean region, *Dendroica petechia*, island biogeography, mitochondrial DNA, phylogeny, West Indies, 1914
blackbirds, costs, galliformes, raptors, sexual selection, shorebirds, waterfowl, 671
chaffinches, cultural evolution, memetic differentiation, song, 351
character evolution, delayed maturation, molt, plumage, shorebirds, 327
environmental effects, fitness, heritability, *Hirundo rustica*, morphological variability, repeatability, secondary sexual characters, 658
foraging cost, handicap principle, *Hirundo rustica*, mate choice, reliable signaling, sexual selection, tail ornament, 1676
frequency-dependent selection, gallmakers, parasitoids, phenotypic selection, plant-insect interaction, predation, woodpeckers, 734
geographic variation, hybridization, phylogeography, speciation, species limits, 96
lekking, lek size, manakins, phylogenetic analysis, social behavior, 1657

Chromosomal Evolution
Aedes, chromosomal homology, enzyme linkage maps, linkage-group conservation, mosquito karyotypic evolution, 146
assortative mating, linkage, selection, 868
bottlenecks, cytoplasmic variation, kin-structured colonization, migration, nuclear variation, salamanders, 1114
Chlamydomonas, parasitic DNA, sex, transposons, 1406
chromosomal evolution, cytochrome-*b* gene, mitochondrial DNA, phylogeny, phylogeography, Robertsonian fusion, *Sorex araneus* group, 623
heterosis, inbreeding, mutation-drift balance, overdominance, 1410

Coevolution
Apterothrips apteris, *Erigeron glaucus*, evolution of sex, herbivores, local adaptation, 465

artificial flowers, *Bombus,* distyly, evolution, herkogamy, heterostyly, pollination, 1595
backcross hybrids, cottonwood, *Populus,* RFLPs, 929
bacteria, bacteriophage, host-parasite coevolution, immunity, resistance, virulence, 1470
cytoplasmic incompatibility, *Drosophila simulans,* host-parasite coevolution, modifier evolution, *Wolbachia,* 1500
Datura stramonium, Epitrix parvula, heritability, Mexico, natural selection, plant resistance to herbivores, quantitative genetics, *Sphenarium purpurascens,* 423
deme formation, gene-for-gene resistance, local adaptation, Red Queen, 454
frequency-dependent selection, gallmakers, parasitoids, phenotypic selection, plant-insect interaction, predation, woodpeckers, 734
gene-for-gene coevolution, linkage, *Linum marginale, Melampsora lini,* origins of resistance, race-specific resistance genes, 1564
genetic correlations, genotype-by-environment interaction, heritability of parasite resistance, host parasite, mollusks, Red Queen hypothesis, trematodes, 1514

Competition

Anolis, competition, evolutionarily stable strategy, frequency dependence, size-advantage, taxon cycle, 1764
Anura, growth, intraspecific competition, kinship, metamorphosis, *Rana cascadae,* 1383
Cryptantha flava, ovule abortion, sibling competition, single-seededness, 1377

Crustaceans

acclimatization, *Daphnia pulicaria,* habitat selection, heritability, niche polymorphisms, 1324
allozymes, Australia, *Daphnia,* dispersal, founder effects, hybridization, speciation, zooplankton, 1333
biplot, *Gammarus minus,* genetic correlations, regressive evolution, 587
Daphnia magna, developmental noise, heterozygosity, phenotypic plasticity, 1715
Excirolana, extinction, gene frequencies, morphology, recolonization, variation, 549
F_{is}, F_{st}, gene flow, grass shrimp, hybrid zone, linkage disequilibrium, mitochondrial DNA, *Palaemonetes kadiakensis,* protein electrophoresis, ribosomal DNA, 376

Development

Acipenser, Actinopterygii, developmental evolution, sturgeon, *Taricha,* 2035
Agelaius phoeniceus, natural selection, overwinter mortality, red-winged blackbird, sexual size dimorphism, 1071
alcohol dehydrogenase, *Drosophila,* metabolic physiology, polymorphism, volatiles, 781
altricial birds, clutch size, comparative study, life-history variation, nestling growth rates, 1397
amphibian, development, environmental heterogeneity, food, genetic variation, growth, phenotypic plasticity, reaction norm, *Scaphiopus,* temperature, toads, trade-off, 1773
Anura, growth, intraspecific competition, kinship, metamorphosis, *Rana cascadae,* 1383
avian growth, development, evolutionary constraint, growth rate, life-history evolution, maturation, skeletal muscle, trade-off, 1080
Bicyclus anynana, butterfly wing, constraint, development, eyespot, genetic correlation, gradient, pattern formation, quantitative genetics, selection, 1147
body size, costs of reproduction, maturation, natural selection, sexual dimorphism, sexual selection, snake, *Vipera berus,* 1389
body size, *Drosophila melanogaster,* phenotypic plasticity, temperature, 1269
character evolution, delayed maturation, molt, plumage, shorebirds, 327
dimorphism, fecundity, *Gryllus firmus,* macroptery, trade-offs, 1650

Drosophila

alcohol dehydrogenase (ADH), *Drosophila,* ethanol tolerance, habitat, 746
alcohol dehydrogenase, *Drosophila,* metabolic physiology, polymorphism, volatiles, 781
alcohol dehydrogenase, ethanol degradation, ^{13}C nuclear magnetic resonance, *Drosophila melanogaster,* 504
antagonistic pleiotropy, *Drosophila,* genotype-by-environment interaction, life history, trade-offs, 1244
antagonistic pleiotropy, *Drosophila,* genotype-by-environment interaction, life history, trade-offs, 1258
artificial selection, *Drosophila melanogaster,* egg-to-pupa viability, inbreeding, 1277
body size, *Drosophila melanogaster,* phenotypic plasticity, temperature, 1269
cactophilic, *Drosophila,* heterozygosity, population structure, random mating, 912
canalization, *Drosophila,* fitness sensitivity, natural selection, 1438
comparative, *Drosophila,* evolution, metabolism, 1230
cytoplasmic incompatibility, *Drosophila simulans,* host-parasite coevolution, modifier evolution, *Wolbachia,* 1500
Drosophila buzzatii, fitness-components analysis, hierarchical models, inversion polymorphism, mating pattern, mating probability, natural population, selective hypothesis, 767
Drosophila melanogaster, heritable variation, mating discrimination, mating speed, sexual selection, 112
sperm competition, sperm displacement, sperm precedence, 758

Ecology

acclimation, adaptation, bacteria, *Escherichia coli,* fitness, temperature, variable environments, 1222
adaptation, genotype-by-environment interaction, phenotypic plasticity, sticklebacks, trophic morphology, 1723
Agelaius phoeniceus, natural selection, overwinter mortality, red-winged blackbird, sexual size dimorphism, 1071
alcohol dehydrogenase (ADH), *Drosophila,* ethanol tolerance, habitat, 746
allozymes, *Gambusia holbrooki,* heterozygosity, life history, Poeciliidae, stress, temperature, 1810

amphibian, development, environmental heterogeneity, food, genetic variation, growth, phenotypic plasticity, reaction norm, *Scaphiopus*, temperature, toads, trade-off, 1773
Asteraceae, *Erigeron annuus*, fitness, genetic variation, genotype-by-environment interaction, heterogeneous environments, spatial autocorrelation, 1607
body size, *Drosophila melanogaster*, phenotypic plasticity, temperature, 1269
Chorthippus parallelus, crossing experiments, epistasis, Haldane's rule, hybrid zone, testis dysfunction, 392
cladogenesis, density dependence, evolution, extinction, phylogeny, 523
cricket, environmental variability, genetic variance, *Gryllus pennsylvanicus*, heritability, life-history characters, 1637
demographic stochasticity, extinction, environmental stochasticity, mutation, 1460
developmental noise, quantitative-genetic model, selection, 1478
diallel experiment, environmental maternal effects, environmental paternal effects, genetic maternal effects, genetic paternal effects, pollen-selection hypothesis, *Solidago altissima*, 1525
environmental effects, fitness, heritability, *Hirundo rustica*, morphological variability, repeatability, secondary sexual characters, 658
gametic compatibility, *Patiriella*, reproductive isolation, 564
spectral properties, spiders, spider silks, 287

Electrophoresis
Bacillus mycoides, bacterial taxonomy, biochemical tests, multilocus enzyme electrophoresis, population genetics, restriction-fragment-length polymorphism, sibling species, 1698
coral, fragmentation, genetic subdivision, larval dispersal, philopatry, *Seriatopera hystrix*, sexual reproduction, 1183
F_{is}, F_{st}, gene flow, grass shrimp, hybrid zone, linkage disequilibrium, mitochondrial DNA, *Palaemonetes kadiakensis*, protein electrophoresis, ribosomal DNA, 376

Fishes
adaptation, genotype-by-environment interaction, phenotypic plasticity, sticklebacks, trophic morphology, 1723
allozymes, disequilibrium, *Gambusia*, genetic drift, hybrid zones, mitochondrial DNA, 155
allozymes, *Gambusia holbrooki*, heterozygosity, life history, Poeciliidae, stress, temperature, 1810
alternative reproductive tactics, breeding success, density, hatcheries, natural selection, *Oncorhynchus* kisutch, salmon, sexual dimorphism, sexual selection, 637
biogeography, cytochrome *b*, *Gasterosteus aculeatus*, mitochondrial-DNA sequences, molecular phylogeny, Pleistocene refugia, polymerase chain reaction, substitution rate, 608

Fitness
acclimation, adaptation, bacteria, *Escherichia coli*, fitness, temperature, variable environments, 1222
adaptation, genotype-by-environment interaction, phenotypic plasticity, sticklebacks, trophic morphology, 1723
amphibians, animal reproduction, fitness, life history, quantitative genetics, sexual selection, 1286
antagonistic pleiotropy, *Drosophila*, genotype-by-environment interaction, life history, trade-offs, 1244
antagonistic pleiotropy, *Drosophila*, genotype-by-environment interaction, life history, trade-offs, 1258
ants, queen-worker conflict, relatedness asymmetry, sex ratio, sociality, 1121
assortative mating, linkage, selection, 868
Asteraceae, *Erigeron annuus*, fitness, genetic variation, genotype-by-environment interaction, heterogeneous environments, spatial autocorrelation, 1607
Bacillus subtilis, compensatory evolution, fitness, mutation, pleiotropy, resistance, rifampicin, 81
Bacillus thuringiensis, fitness, *Plutella xylostella*, resistance, 197
bees, eusociality, *Exoneura bicolor*, local fitness enhancement, relatedness, social evolution, social insects, 1684
blackbirds, costs, galliformes, raptors, sexual selection, shorebirds, waterfowl, 671
canalization, *Drosophila*, fitness sensitivity, natural selection, 1438
clutch size, fecundity, offspring size, reproductive cost, reproductive effort, reptiles, 137
crossing distance, *Delphinium nelsonii*, inbreeding depression, larkspur, outbreeding depression, plant population structure, progeny fitness, 842
demographic stochasticity, extinction, environmental stochasticity, mutation, 1460
dimorphism, fecundity, *Gryllus firmus*, macropteryy, trade-offs, 1650
divergence, hybrid fitness, premating isolation, reinforcement, reproductive character displacement, secondary contact, sexual selection, speciation, 1451
Drosophila buzzatii, fitness-components analysis, hierarchical models, inversion polymorphism, mating pattern, mating probability, natural population, selective hypothesis, 767
environmental effects, fitness, heritability, *Hirundo rustica*, morphological variability, repeatability, secondary sexual characters, 658
epistasis, *Impatiens*, inbreeding depression, jewelweed, serial inbreeding, 818
foraging cost, handicap principle, *Hirundo rustica*, mate choice, reliable signaling, sexual selection, tail ornament, 1676
heterosis, inbreeding, mutation-drift balance, overdominance, 1410

Fungi
frequency-dependent selection, fungi, heterokaryon, self/nonself, vegetative incompatibility, 979
gene-for-gene coevolution, linkage, *Linum marginale*, *Melampsora lini*, origins of resistance, race-specific resistance genes, 1564
interspecific interference, Plethodontidae, reproduction, salamanders, sympatry, 921

Gene Flow

Albinaria, allozymes, dispersal, gene flow, genetic distance, land snail, population structure, 577

Ambystoma maculatum, historical patterns of gene flow, intraspecific sequence divergence, mitochondrial DNA, Pleistocene glaciation, restriction-site analysis, spotted salamander, 597

Apiaceae, comparative approach, *Cryptotaenia canadensis,* gene flow, hierarchical *F*-statistics, isozymes, *Osmorhiza,* population genetic structure, *Sanicula odorata,* seed dispersal, 791

Asclepias exaltata, gene flow, interspecific hybridization, milkweed, pollen dispersal, 1032

biogeography, *Ensatina eschsholtzii,* gene flow, multidimensional scaling, phylogenetics, proteins, ring species, speciation, taxonomy, 876

Cecropia obtusifolia, demographic genetics, gene flow, genetic buffering, genetic structure, genetic variation, seed-bank genetics, seed dispersal, 437

coral, fragmentation, genetic subdivision, larval dispersal, philopatry, *Seriatopera hystrix,* sexual reproduction, 1183

crypsis, gene flow, genetic variation, habitat heterogeneity, host specialization, isolation by distance, multiple-niche polymorphism, natural selection, spatial scale, *Timema cristinae,* 1866

ecological races, gene flow, hybridization, mitochondrial-DNA divergence, *Papilio machaon,* 408

F_{is}, F_{st}, gene flow, grass shrimp, hybrid zone, linkage disequilibrium, mitochondrial DNA, *Palaemonetes kadiakensis,* protein electrophoresis, ribosomal DNA, 376

gene flow, genetic divergence, morphological divergence, morphotypes, recolonization, variation, 530

gene flow, hierarchical genetic structure, Lasioampidae, Lepidoptera, *Malacosoma americanum,* private alleles, tent caterpillars, Wright's *F*-statistics, 1158

Herbivory

Apterothrips apteris, Erigeron glaucus, evolution of sex, herbivores, local adaptation, 465

cost, defense, *Diplacus aurantiacus,* flavonoids, genetic correlation, heritability, maternal effect, 1550

crypsis, gene flow, genetic variation, habitat heterogeneity, host specialization, isolation by distance, multiple-niche polymorphism, natural selection, spatial scale, *Timema cristinae,* 1866

Datura stramonium, Epitrix parvula, heritability, Mexico, natural selection, plant resistance to herbivores, quantitative genetics, *Sphenarium purpurascens,* 423

Heterosis

aggression, heterozygosity, *Microtus pennsylvanicus,* population cycles, voles, 1350

allozymes, *Gambusia holbrooki,* heterozygosity, life history, Poeciliidae, stress, temperature, 1810

biochemical heterozygosity, morphologic variation, *Papio hamadryas hamadryas,* population genetics, 1211

cactophilic, *Drosophila,* heterozygosity, population structure, random mating, 912

Daphnia magna, developmental noise, heterozygosity, phenotypic plasticity, 1715

genetic erosion, genome purging, heterosis, inbreeding depression, small populations, 996

heterosis, inbreeding, mutation-drift balance, overdominance, 1410

Hybridization

allometry, Darwin's finches, evolutionary potential, genetic constraints, genetic correlations, heritabilities, hybridization, mutation-selection balance, polygenic variation, 297

allozymes, Australia, *Daphnia,* dispersal, founder effects, hybridization, speciation, zooplankton, 1333

allozymes, disequilibrium, *Gambusia,* genetic drift, hybrid zones, mitochondrial DNA, 155

Asclepias exaltata, gene flow, interspecific hybridization, milkweed, pollen dispersal, 1032

assortative mating, chloroplast DNA, cytonuclear, disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1946

backcross hybrids, cottonwood, *Populus,* RFLPs, 929

chloroplast-DNA variation, evolution, *Pinus,* species hybridization, 1020

Chorthippus parallelus, crossing experiments, epistasis, Haldane's rule, hybrid zone, testis dysfunction, 392

divergence, hybrid fitness, premating isolation, reinforcement, reproductive character displacement, secondary contact, sexual selection, speciation, 1451

ecological races, gene flow, hybridization, mitochondrial-DNA divergence, *Papilio machaon,* 408

energetics, hybrid zones, *Mytilus,* physiological genetics, 267

fertilization barrier, hybrid zone, reproductive isolation, speciation, sperm competition, 705

geographic variation, hybridization, phylogeography, speciation, species limits, 96

Inbreeding

Acrocephalus arundinaceus, band sharing, DNA fingerprinting, great reed warbler, hatching failure, nonincestuous inbreeding, population bottleneck, reproductive success, 317

aphally, *Bulinus truncatus,* grouping effect, inbreeding depression, mating system, snail, 498

Aquilegia caerulea, diallel, inbreeding depression, juvenile traits, maternal effects, quantitative genetics, seed mass, 828

artificial selection, *Drosophila melanogaster,* egg-to-pupa viability, inbreeding, 1277

assortative mating, chloroplast DNA, cytonuclear, disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1946

crossing distance, *Delphinium nelsonii,* inbreeding depression, larkspur, outbreeding depression, plant population structure, progeny fitness, 842

Decodon verticillatus, genetic load, inbreeding, inbreeding depression, natural selection, self-fertilization, 952

epistasis, *Impatiens,* inbreeding depression, jewelweed, serial inbreeding, 818

genetic erosion, genome purging, heterosis, inbreeding depression, small populations, 996

heterosis, inbreeding, mutation-drift balance, overdominance, 1410

inbreeding, inbreeding depression, *Mimulus,* purging, recessive mutations, self-fertilization, 806
inbreeding depression, mutations, self-fertilization, selfing rate, 965
inbreeding depression, ratios, self fertilization, 1735

INSECTS
Aedes, chromosomal homology, enzyme linkage maps, linkage-group conservation, mosquito karyotypic evolution, 146
agastoparasitism, convergence, Cynipidae, Emery's rule, evolution, gall wasps, inquilinism, phylogeny, 241
age-specific mortality, *Callobruchus maculatus,* genetic variation, senescence, 1371
ants, eusociality, genetic variation, Hymenoptera, polyandry, polygyny, social insects, 694
ants, queen-worker conflict, relatedness asymmetry, sex ratio, sociality, 1121
Aperothrips apteris, Erigeron glaucus, evolution of sex, herbivores, local adaptation, 465
artificial flowers, *Bombus,* distyly, evolution, herkogamy, heterostyly, pollination, 1595
assortative mating, grasshopper, mate recognition, mating signals, morphology, population divergence, 1202
Bacillus thuringiensis, fitness, *Plutella xylostella,* resistance, 197
bees, eusociality, *Exoneura bicolor,* local fitness enhancement, relatedness, social evolution, social insects, 1684
Bicyclus anynana, butterfly wing, constraint, development, eyespot, genetic correlation, gradient, pattern formation, quantitative genetics, selection, 1147
Chorthippus parallelus, crossing experiments, epistasis, Haldane's rule, hybrid zone, testis dysfunction, 392
copulation, courtship, cryptic female choice, insects, intrageneric variation, sexual selection, spiders, 711
cost, defense, *Diplacus aurantiacus,* flavonoids, genetic correlation, heritability, maternal effect, 1550
cricket, environmental variability, genetic variance, *Gryllus pennsylvanicus,* heritability, life-history characters, 1637
crypsis, gene flow, genetic variation, habitat heterogeneity, host specialization, isolation by distance, multiple-niche polymorphism, natural selection, spatial scale, *Timema cristinae,* 1866
Datura stramonium, Epitrix parvula, heritability, Mexico, natural selection, plant resistance to herbivores, quantitative genetics, *Sphenarium purpurascens,* 423
deme formation, gene-for-gene resistance, local adaptation, Red Queen, 454
dimorphism, fecundity, *Gryllus firmus,* macroptery, trade-offs, 1650
ecological races, gene flow, hybridization, mitochondrial-DNA divergence, *Papilio machaon,* 408
fertilization barrier, hybrid zone, reproductive isolation, speciation, sperm competition, 705
frequency-dependent selection, gallmakers, parasitoids, phenotypic selection, plant-insect interaction, predation, woodpeckers, 734
gene flow, hierarchical genetic structure, Lasioampidae, Lepidoptera, *Malacosoma americanum,* private alleles, tent caterpillars, Wright's *F*-statistics, 1158

LIFE HISTORY
allozymes, *Gambusia holbrooki,* heterozygosity, life history, Poeciliidae, stress, temperature, 1810
altricial birds, clutch size, comparative study, life-history variation, nestling growth rates, 1397
amphibians, animal reproduction, fitness, life history, quantitative genetics, sexual selection, 1286
angiosperms, diversification, geographical distribution, growth form, life-history flexibility, pollination, seed dispersal, speciation rate, species richness, 1619
antagonistic pleiotropy, *Drosophila,* genotype-by-environment interaction, life history, trade-offs, 1244
antagonistic pleiotropy, *Drosophila,* genotype-by-environment interaction, life history, trade-offs, 1258
avian growth, development, evolutionary constraint, growth rate, life-history evolution, maturation, skeletal muscle, trade-off, 1080
cricket, environmental variability, genetic variance, *Gryllus pennsylvanicus,* heritability, life-history characters, 1637
Daphnia magna, developmental noise, heterozygosity, phenotypic plasticity, 1715

MAMMALS
aggression, heterozygosity, *Microtus pennsylvanicus,* population cycles, voles, 1350
Amazon Basin, arboreal spiny rat, cytochrome *b, Mesomys,* mitochondrial DNA, haplotype, phylogeography, river barriers, 1314
antelopes, rates, ribosomal RNA, secondary structure, 188
behavior, brain, distance matrices, double-permutation test, evolution, Mantel test, marsupials, multiple regression, permutation test, triple-permutation test, 1487
biochemical heterozygosity, morphologic variation, *Papio hamadryas hamadryas,* population genetics, 1211
chromosomal evolution, cytochrome-*b* gene, mitochondrial DNA, phylogeny, phylogeography, Robertsonian fusion, *Sorex araneus* group, 623
endothermy, mammals, maxilloturbinates, metabolism, nasal turbinates, reptiles, therapsids, 207
historical biogeography, intraspecific phylogeography, mitochondrial DNA, *Odocoileus virginianus,* white-tailed deer, 122
life tables, mammals, senescence, 509

MAYR, ERNST
Disciplining evolutionary biology: Ernst Mayr and the founding of the Society for the Study of Evolution, 1
Ernst Mayr and evolutionary biology, 36
Ernst Mayr and the centrality of species, 31
Ernst Mayr and the origin of species, 19
Ernst Mayr, the ornithologist, 12
Some personal recollections of Ernst Mayr, 9

MOLECULAR EVOLUTION
Agelaius, blackbird evolution, comparative approach, cytochrome *b,* DNA sequencing, mono-

phyly, phylogenetic, polymerase chain reaction, 679
allozymes, disequilibrium, *Gambusia,* genetic drift, hybrid zones, mitochondrial DNA, 155
Amazon Basin, arboreal spiny rat, cytochrome *b, Mesomys,* mitochondrial DNA, haplotype, phylogeography, river barriers, 1314
Ambystoma maculatum, historical patterns of gene flow, intraspecific sequence divergence, mitochondrial DNA, Pleistocene glaciation, restriction-site analysis, spotted salamander, 597
amphibian, Anura, *Hyla versicolor* complex, mitochondrial DNA, polyploidy, speciation, tree frogs, 898
antelopes, rates, ribosomal RNA, secondary structure, 188
backcross hybrids, cottonwood, *Populus,* RFLPs, 929
biogeography, *Cryptobranchus,* molecular evolution, phylogeny, 1799
biogeography, cytochrome *b, Gasterosteus aculeatus,* mitochondrial-DNA sequences, molecular phylogeny, Pleistocene refugia, polymerase chain reaction, substitution rate, 608
biogeography, marine turtles, mtDNA, phylogeography, 1820
bird, Caribbean region, *Coereba flaveola,* genetic divergence, genetic diversity, historical biogeography, mtDNA, RFLP, West Indies, 1041
bird, Caribbean region, *Dendroica petechia,* island biogeography, mitochondrial DNA, phylogeny, West Indies, 1914
bottlenecks, cytoplasmic variation, kin-structured colonization, migration, nuclear variation, salamanders, 1114
Chlamydomonas, parasitic DNA, sex, transposons, 1406
chromosomal evolution, cytochrome-*b* gene, mitochondrial DNA, phylogeny, phylogeography, Robertsonian fusion, *Sorex araneus* group, 623
cytochrome *b,* cytochrome oxidase, direct sequencing, dispersal biogeography, *Gallotia* lizards, island colonization, mitochondrial DNA, nuclear DNA, PCR, RAPD, restriction-fragment-length polymorphisms, 12s rRNA, 230
ecological races, gene flow, hybridization, mitochondrial-DNA divergence, *Papilio machaon,* 408
F_{is}, F_{st}, gene flow, grass shrimp, hybrid zone, linkage disequilibrium, mitochondrial DNA, *Palaemonetes kadiakensis,* protein electrophoresis, ribosomal DNA, 376
geographic variation, hybridization, phylogeography, speciation, species limits, 96
historical biogeography, intraspecific phylogeography, mitochondrial DNA, *Odocoileus virginianus,* white-tailed deer, 122
horseshoe crabs, mitochondrial DNA, molecular clocks, phylogeny, 1986
molecular evolution, natural selection, neutral-allele theory, overdominance, point process, SAS-CFF, substitution process, underdominance, 1101

Mollusks

Albinaria, allozymes, dispersal, gene flow, genetic distance, land snail, population structure, 577
aphally, *Bulinus truncatus,* grouping effect, inbreeding depression, mating system, snail, 498
capsule, Gastropoda, isopod, *Nucella emarginata,* predation, wall thickness, 1301
energetics, hybrid zones, *Mytilus,* physiological genetics, 267
genetic correlations, genotype-by-environment interaction, heritability of parasite resistance, host parasite, mollusks, Red Queen hypothesis, trematodes, 1514

Morphology

acclimatization, *Daphnia pulicaria,* habitat selection, heritability, niche polymorphisms, 1324
adaptation, *Anolis,* constraint, ecological morphology, lizard, niche, specialization, 1786
adaptation, genotype-by-environment interaction, phenotypic plasticity, sticklebacks, trophic morphology, 1723
aerodynamics, animal flight, long tails, sexual dimorphism, sexual selection, wings, 1062
agastoparasitism, convergence, Cynipidae, Emery's rule, evolution, gall wasps, inquilinism, phylogeny, 241
Agelaius phoeniceus, natural selection, overwinter mortality, red-winged blackbird, sexual size dimorphism, 1071
alcohol dehydrogenase, *Drosophila,* metabolic physiology, polymorphism, volatiles, 781
allometry, biomass, organic shape, 44
allometry, Darwin's finches, evolutionary potential, genetic constraints, genetic correlations, heritabilities, hybridization, mutation-selection balance, polygenic variation, 297
alternative reproductive tactics, breeding success, density, hatcheries, natural selection, *Oncorhynchus* kisutch, salmon, sexual dimorphism, sexual selection, 637
Anolis, competition, evolutionarily stable strategy, frequency dependence, size-advantage, taxon cycle, 1764
aphally, *Bulinus truncatus,* grouping effect, inbreeding depression, mating system, snail, 498
aposematism, crypsis, marine invertebrates, unpalatability, 925
artificial flowers, *Bombus,* distyly, evolution, herkogamy, heterostyly, pollination, 1595
artificial selection, plants, quantitative genetics, sexual dimorphism, *Silene alba, Silene latifolia,* 939
assortative mating, grasshopper, mate recognition, mating signals, morphology, population divergence, 1202
Asterias, bilateral symmetry, cephalization, *Echinometra, Heterocentrotus,* irregular echinoids, locomotor anterior, radial symmetry, regular echinoids, test, 1130
avian growth, development, evolutionary constraint, growth rate, life-history evolution, maturation, skeletal muscle, trade-off, 1080
Bacillus mycoides, bacterial taxonomy, biochemical tests, multilocus enzyme electrophoresis, population genetics, restriction-fragment-length polymorphism, sibling species, 1698
Bicyclus anynana, butterfly wing, constraint, development, eyespot, genetic correlation, gradient, pattern formation, quantitative genetics, selection, 1147

biplot, *Gammarus minus,* genetic correlations, regressive evolution, 587
body size, costs of reproduction, maturation, natural selection, sexual dimorphism, sexual selection, snake, *Vipera berus,* 1389
capsule, Gastropoda, isopod, *Nucella emarginata,* predation, wall thickness, 1301
character evolution, delayed maturation, molt, plumage, shorebirds, 327
clutch size, fecundity, offspring size, reproductive cost, reproductive effort, reptiles, 137
context-dependent transmission, *Eichhornia paniculata,* experimental populations, mating systems, pollen discounting, self-fertilization, tristyly, 1576
Cordylochernes scorpiodes, lactate dehydrogenase, population divergence, postzygotic isolation, prezygotic isolation, pseudoscorpion, sexual selection, speciation, spermatophore, 1168
Cryptantha flava, ovule abortion, sibling competition, single-seededness, 1377
Daphnia magna, developmental noise, heterozygosity, phenotypic plasticity, 1715
dimorphism, fecundity, *Gryllus firmus,* macropterry, trade-offs, 1650
Drosophila buzzatii, fitness-components analysis, hierarchical models, inversion polymorphism, mating pattern, mating probability, natural population, selective hypothesis, 767
environmental effects, fitness, heritability, *Hirundo rustica,* morphological variability, repeatability, secondary sexual characters, 658
Excirolana, extinction, gene frequencies, morphology, recolonization, variation, 549
experimental manipulation, floral morphology, floral gender expression, genetic correlation, heritability, hummingbird pollination, mechanism of selection, pollen receipt, sex allocation, 55
extrapair paternity, female choice, polygyny, sexual dichromatism, sexual selection, sperm competition, 1089
foraging cost, handicap principle, *Hirundo rustica,* mate choice, reliable signaling, sexual selection, tail ornament, 1676
gene flow, genetic divergence, morphological divergence, morphotypes, recolonization, variation, 530
handicap principle, mate choice, runaway, sexual characters, sexual selection, 853

Paleontology

Ambystoma maculatum, historical patterns of gene flow, intraspecific sequence divergence, mitochondrial DNA, Pleistocene glaciation, restriction-site analysis, spotted salamander, 597
biogeography, cytochrome *b, Gasterosteus aculeatus,* mitochondrial-DNA sequences, molecular phylogeny, Pleistocene refugia, polymerase chain reaction, substitution rate, 608
bryozoa, genetic drift, heritability, *Metrarabdotos,* mutation, natural selection, phenotypic evolution, quantitative genetics, stabilizing selection, 360
endothermy, mammals, maxilloturbinates, metabolism, nasal turbinates, reptiles, therapsids, 207

Parasitism

agastoparasitism, convergence, Cynipidae, Emery's rule, evolution, gall wasps, inquilinism, phylogeny, 241
bacteria, bacteriophage, host-parasite coevolution, immunity, resistance, virulence, 1470
cytoplasmic incompatibility, *Drosophila simulans,* host-parasite coevolution, modifier evolution, *Wolbachia,* 1500
evolution, microparasite, population biology, virulence, virus, 1423
fecundity, hosts, incompatibility, sterilization, *Wolbachia,* 909
frequency-dependent selection, gallmakers, parasitoids, phenotypic selection, plant-insect interaction, predation, woodpeckers, 734
gene-for-gene coevolution, linkage, *Linum marginale, Melampsora lini,* origins of resistance, race-specific resistance genes, 1564
genetic correlations, genotype-by-environment interaction, heritability of parasite resistance, host parasite, mollusks, Red Queen hypothesis, trematodes, 1514

Phylogeny

adaptation, character mapping, hypothesis tests, homoplasy, phylogeny, 172
agastoparasitism, convergence, Cynipidae, Emery's rule, evolution, gall wasps, inquilinism, phylogeny, 241
Agelaius, blackbird evolution, comparative approach, cytochrome *b,* DNA sequencing, monophyly, phylogenetic, polymerase chain reaction, 679
alcohol dehydrogenase (ADH), *Drosophila,* ethanol tolerance, habitat, 746
allopatry, dispersal, distributional overlap, peripheral isolation, phylogeny, sympatry, vicariance, 490
Amazon Basin, arboreal spiny rat, cytochrome *b, Mesomys,* mitochondrial DNA, haplotype, phylogeography, river barriers, 1314
amphibian, Anura, *Hyla versicolor* complex, mitochondrial DNA, polyploidy, speciation, tree frogs, 898
behavior, brain, distance matrices, double-permutation test, evolution, Mantel test, marsupials, multiple regression, permutation test, triple-permutation test, 1487
biogeography, *Cryptobranchus,* molecular evolution, phylogeny, 1799
biogeography, cytochrome *b, Gasterosteus aculeatus,* mitochondrial-DNA sequences, molecular phylogeny, Pleistocene refugia, polymerase chain reaction, substitution rate, 608
biogeography, *Ensatina eschsholtzii,* gene flow, multidimensional scaling, phylogenetics, proteins, ring species, speciation, taxonomy, 876
biogeography, marine turtles, mtDNA, phylogeography, 1820
bird, Caribbean region, *Dendroica petechia,* island biogeography, mitochondrial DNA, phylogeny, West Indies, 1914
chromosomal evolution, cytochrome-*b* gene, mitochondrial DNA, phylogeny, phylogeography, Robertsonian fusion, *Sorex araneus* group, 623
cladogenesis, density dependence, evolution, extinction, phylogeny, 523
historical biogeography, intraspecific phylogeography, mitochondrial DNA, *Odocoileus virginianus,* white-tailed deer, 122

horseshoe crabs, mitochondrial DNA, molecular clocks, phylogeny, 1986
lekking, lek size, manakins, phylogenetic analysis, social behavior, 1657

Physiology

Agelaius, blackbird evolution, comparative approach, cytochrome *b,* DNA sequencing, monophyly, phylogenetic, polymerase chain reaction, 679
alcohol dehydrogenase (ADH), *Drosophila,* ethanol tolerance, habitat, 746
alcohol dehydrogenase, *Drosophila,* metabolic physiology, polymorphism, volatiles, 781
alcohol dehydrogenase, ethanol degradation, ^{13}C nuclear magnetic resonance, *Drosophila melanogaster,* 504
aerodynamics, animal flight, long tails, sexual dimorphism, sexual selection, wings, 1062
avian growth, development, evolutionary constraint, growth rate, life-history evolution, maturation, skeletal muscle, trade-off, 1080
biogeography, *Ensatina eschsholtzii,* gene flow, multidimensional scaling, phylogenetics, proteins, ring species, speciation, taxonomy, 876
character evolution, delayed maturation, molt, plumage, shorebirds, 327
comparative, *Drosophila,* evolution, metabolism, 1230
cost, defense, *Diplacus aurantiacus,* flavonoids, genetic correlation, heritability, maternal effect, 1550
endothermy, mammals, maxilloturbinates, metabolism, nasal turbinates, reptiles, therapsids, 207
energetics, hybrid zones, *Mytilus,* physiological genetics, 267
spectral properties, spiders, spider silks, 287
sperm competition, sperm displacement, sperm precedence, 758

Plants

adaptive traits, allozymes, edaphic selection, population differentiation, time scales, 1009
allopolyploidy, *Asplenium,* colonization, Hawaii, long-distance dispersal, speciation, 1364
Apiaceae, comparative approach, *Cryptotaenia canadensis,* gene flow, hierarchical *F*-statistics, isozymes, *Osmorhiza,* population genetic structure, *Sanicula odorata,* seed dispersal, 791
Apterothrips apteris, Erigeron glaucus, evolution of sex, herbivores, local adaptation, 465
Aquilegia caerulea, diallel, inbreeding depression, juvenile traits, maternal effects, quantitative genetics, seed mass, 828
Asclepias exaltata, gene flow, interspecific hybridization, milkweed, pollen dispersal, 1032
Asteraceae, *Erigeron annuus,* fitness, genetic variation, genotype-by-environment interaction, heterogeneous environments, spatial autocorrelation, 1607
backcross hybrids, cottonwood, *Populus,* RFLPs, 929
Cecropia obtusifolia, demographic genetics, gene flow, genetic buffering, genetic structure, genetic variation, seed-bank genetics, seed dispersal, 437
chloroplast-DNA variation, evolution, *Pinus,* species hybridization, 1020
congener, *Echinacea,* genetic variability, population genetic structure, 180
context-dependent transmission, *Eichhornia paniculata,* experimental populations, mating systems, pollen discounting, self-fertilization, tristyly, 1576
crossing distance, *Delphinium nelsonii,* inbreeding depression, larkspur, outbreeding depression, plant population structure, progeny fitness, 842
Cryptantha flava, ovule abortion, sibling competition, single-seededness, 1377
Decodon verticillatus, genetic load, inbreeding, inbreeding depression, natural selection, self-fertilization, 952
epistasis, *Impatiens,* inbreeding depression, jewelweed, serial inbreeding, 818
experimental manipulation, floral morphology, floral gender expression, genetic correlation, heritability, hummingbird pollination, mechanism of selection, pollen receipt, sex allocation, 55
gene-for-gene coevolution, linkage, *Linum marginale, Melampsora lini,* origins of resistance, race-specific resistance genes, 1564
inbreeding, inbreeding depression, *Mimulus,* purging, recessive mutations, self-fertilization, 806

Population Biology

acclimatization, *Daphnia pulicaria,* habitat selection, heritability, niche polymorphisms, 1324
Acipenser, Actinopterygii, developmental evolution, sturgeon, *Taricha,* 2035
Acrocephalus arundinaceus, band sharing, DNA fingerprinting, great reed warbler, hatching failure, nonincestuous inbreeding, population bottleneck, reproductive success, 317
adaptation, *Anolis,* constraint, ecological morphology, lizard, niche, specialization, 1786
adaptive traits, allozymes, edaphic selection, population differentiation, time scales, 1009
Aedes, chromosomal homology, enzyme linkage maps, linkage-group conservation, mosquito karyotypic evolution, 146
aggression, heterozygosity, *Microtus pennsylvanicus,* population cycles, voles, 1350
Albinaria, allozymes, dispersal, gene flow, genetic distance, land snail, population structure, 577
allopatry, dispersal, distributional overlap, peripheral isolation, phylogeny, sympatry, vicariance, 490
allopolyploidy, *Asplenium,* colonization, Hawaii, long-distance dispersal, speciation, 1364
allozymes, Australia, *Daphnia,* dispersal, founder effects, hybridization, speciation, zooplankton, 1333
Apiaceae, comparative approach, *Cryptotaenia canadensis,* gene flow, hierarchical *F*-statistics, isozymes, *Osmorhiza,* population genetic structure, *Sanicula odorata,* seed dispersal, 791
assortative mating, grasshopper, mate recognition, mating signals, morphology, population divergence, 1202
assortative mating, linkage, selection, 868
Bacillus mycoides, bacterial taxonomy, biochemical tests, multilocus enzyme electrophoresis, population genetics, restriction-fragment-length polymorphism, sibling species, 1698
biochemical heterozygosity, morphologic variation, *Papio hamadryas hamadryas,* population genetics, 1211
biplot, *Gammarus minus,* genetic correlations, regressive evolution, 587

bird, Caribbean region, *Coereba flaveola*, genetic divergence, genetic diversity, historical biogeography, mtDNA, RFLP, West Indies, 1041
bottlenecks, cytoplasmic variation, kin-structured colonization, migration, nuclear variation, salamanders, 1114
chaffinches, cultural evolution, memetic differentiation, song, 351
chromosomal evolution, cytochrome-*b* gene, mitochondrial DNA, phylogeny, phylogeography, Robertsonian fusion, *Sorex araneus* group, 623
coral, fragmentation, genetic subdivision, larval dispersal, philopatry, *Seriatopera hystrix*, sexual reproduction, 1183
Cordylochernes scorpiodes, lactate dehydrogenase, population divergence, postzygotic isolation, prezygotic isolation, pseudoscorpion, sexual selection, speciation, spermatophore, 1168
crossing distance, *Delphinium nelsonii*, inbreeding depression, larkspur, outbreeding depression, plant population structure, progeny fitness, 842
cactophilic, *Drosophila*, heterozygosity, population structure, random mating, 912
congener, *Echinacea*, genetic variability, population genetic structure, 180
cytochrome *b*, cytochrome oxidase, direct sequencing, dispersal biogeography, *Gallotia* lizards, island colonization, mitochondrial DNA, nuclear DNA, PCR, RAPD, restriction-fragment-length polymorphisms, 12s rRNA, 230
deme formation, gene-for-gene resistance, local adaptation, Red Queen, 454
demographic stochasticity, extinction, environmental stochasticity, mutation, 1460
ecological races, gene flow, hybridization, mitochondrial-DNA divergence, *Papilio machaon*, 408
epistasis, interdemic selection, migration, population structure, shifting balance, 69
evolution, microparasite, population biology, virulence, virus, 1423
Excirolana, extinction, gene frequencies, morphology, recolonization, variation, 549
fertilization barrier, hybrid zone, reproductive isolation, speciation, sperm competition, 705
gene-for-gene coevolution, linkage, *Linum marginale*, *Melampsora lini*, origins of resistance, race-specific resistance genes, 1564
gene flow, genetic divergence, morphological divergence, morphotypes, recolonization, variation, 530
gene flow, hierarchical genetic structure, Lasioampidae, Lepidoptera, *Malacosoma americanum*, private alleles, tent caterpillars, Wright's *F*-statistics, 1158
genetic erosion, genome purging, heterosis, inbreeding depression, small populations, 996
interspecific interference, Plethodontidae, reproduction, salamanders, sympatry, 921
life tables, mammals, senescence, 509

PREDATION

aposematism, crypsis, marine invertebrates, unpalatability, 925
capsule, Gastropoda, isopod, *Nucella emarginata*, predation, wall thickness, 1301
frequency-dependent selection, gallmakers, parasitoids, phenotypic selection, plant-insect interaction, predation, woodpeckers, 734

QUANTITATIVE GENETICS

amphibians, animal reproduction, fitness, life history, quantitative genetics, sexual selection, 1286
Aquilegia caerulea, diallel, inbreeding depression, juvenile traits, maternal effects, quantitative genetics, seed mass, 828
artificial selection, plants, quantitative genetics, sexual dimorphism, *Silene alba*, *Silene latifolia*, 939
assortative mating, chloroplast DNA, cytonuclear, disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1946
Bicyclus anynana, butterfly wing, constraint, development, eyespot, genetic correlation, gradient, pattern formation, quantitative genetics, selection, 1147
bryozoa, genetic drift, heritability, *Metrarabdotos*, mutation, natural selection, phenotypic evolution, quantitative genetics, stabilizing selection, 360
Datura stramonium, *Epitrix parvula*, heritability, Mexico, natural selection, plant resistance to herbivores, quantitative genetics, *Sphenarium purpurascens*, 423
developmental noise, quantitative-genetic model, selection, 1478

REPRODUCTION—ANIMAL

Acrocephalus arundinaceus, band sharing, DNA fingerprinting, great reed warbler, hatching failure, nonincestuous inbreeding, population bottleneck, reproductive success, 317
alternative reproductive tactics, breeding success, density, hatcheries, natural selection, *Oncorhynchus* kisutch, salmon, sexual dimorphism, sexual selection, 637
ants, eusociality, genetic variation, Hymenoptera, polyandry, polygyny, social insects, 694
aphally, *Bulinus truncatus*, grouping effect, inbreeding depression, mating system, snail, 498
assortative mating, linkage, selection, 868
cactophilic, *Drosophila*, heterozygosity, population structure, random mating, 912
clutch size, fecundity, offspring size, reproductive cost, reproductive effort, reptiles, 137
copulation, courtship, cryptic female choice, insects, intrageneric variation, sexual selection, spiders, 711
coral, fragmentation, genetic subdivision, larval dispersal, philopatry, *Seriatopera hystrix*, sexual reproduction, 1183
Drosophila buzzatii, fitness-components analysis, hierarchical models, inversion polymorphism, mating pattern, mating probability, natural population, selective hypothesis, 767
Drosophila melanogaster, heritable variation, mating discrimination, mating speed, sexual selection, 112
extrapair paternity, female choice, polygyny, sexual dichromatism, sexual selection, sperm competition, 1089
fecundity, hosts, incompatibility, sterilization, *Wolbachia*, 909
gametic compatibility, *Patiriella*, reproductive isolation, 564

interspecific interference, Plethodontidae, reproduction, salamanders, sympatry, 921
lekking, lek size, manakins, phylogenetic analysis, social behavior, 1657
sperm competition, sperm displacement, sperm precedence, 758

Reproduction—Plant
angiosperms, diversification, geographical distribution, growth form, life-history flexibility, pollination, seed dispersal, speciation rate, species richness, 1619
Apiaceae, comparative approach, *Cryptotaenia canadensis,* gene flow, hierarchical *F*-statistics, isozymes, *Osmorhiza,* population genetic structure, *Sanicula odorata,* seed dispersal, 791
artificial flowers, *Bombus,* distyly, evolution, herkogamy, heterostyly, pollination, 1595
artificial selection, plants, quantitative genetics, sexual dimorphism, *Silene alba, Silene latifolia,* 939
Asclepias exaltata, gene flow, interspecific hybridization, milkweed, pollen dispersal, 1032
Cecropia obtusifolia, demographic genetics, gene flow, genetic buffering, genetic structure, genetic variation, seed-bank genetics, seed dispersal, 437
context-dependent transmission, *Eichhornia paniculata,* experimental populations, mating systems, pollen discounting, self-fertilization, tristyly, 1576
Decodon verticillatus, genetic load, inbreeding, inbreeding depression, natural selection, self-fertilization, 952
deme formation, gene-for-gene resistance, local adaptation, Red Queen, 454
diallel experiment, environmental maternal effects, environmental paternal effects, genetic maternal effects, genetic paternal effects, pollen-selection hypothesis, *Solidago altissima,* 1525
experimental manipulation, floral morphology, floral gender expression, genetic correlation, heritability, hummingbird pollination, mechanism of selection, pollen receipt, sex allocation, 55
frequency-dependent selection, fungi, heterokaryon, self/nonself, vegetative incompatibility, 979
inbreeding, inbreeding depression, *Mimulus,* purging, recessive mutations, self-fertilization, 806
inbreeding depression, mutations, self-fertilization, selfing rate, 965
inbreeding depression, ratios, self fertilization, 1735

Reptiles
adaptation, *Anolis,* constraint, ecological morphology, lizard, niche, specialization, 1786
Anolis, competition, evolutionarily stable strategy, frequency dependence, size-advantage, taxon cycle, 1764
biogeography, marine turtles, mtDNA, phylogeography, 1820
body size, costs of reproduction, maturation, natural selection, sexual dimorphism, sexual selection, snake, *Vipera berus,* 1389
clutch size, fecundity, offspring size, reproductive cost, reproductive effort, reptiles, 137
cytochrome *b,* cytochrome oxidase, direct sequencing, dispersal biogeography, *Gallotia* lizards, island colonization, mitochondrial DNA, nuclear DNA, PCR, RAPD, restriction-fragment-length polymorphisms, 12s rRNA, 230
endothermy, mammals, maxilloturbinates, metabolism, nasal turbinates, reptiles, therapsids, 207

Selection—Experimental
artificial selection, *Drosophila melanogaster,* egg-to-pupa viability, inbreeding, 1277
experimental manipulation, floral morphology, floral gender expression, genetic correlation, heritability, hummingbird pollination, mechanism of selection, pollen receipt, sex allocation, 55

Selection—Natural
alternative reproductive tactics, breeding success, density, hatcheries, natural selection, *Oncorhynchus* kisutch, salmon, sexual dimorphism, sexual selection, 637
body size, costs of reproduction, maturation, natural selection, sexual dimorphism, sexual selection, snake, *Vipera berus,* 1389
bryozoa, genetic drift, heritability, *Metrarabdotos,* mutation, natural selection, phenotypic evolution, quantitative genetics, stabilizing selection, 360
canalization, *Drosophila,* fitness sensitivity, natural selection, 1438
crypsis, gene flow, genetic variation, habitat heterogeneity, host specialization, isolation by distance, multiple-niche polymorphism, natural selection, spatial scale, *Timema cristinae,* 1866
Datura stramonium, Epitrix parvula, heritability, Mexico, natural selection, plant resistance to herbivores, quantitative genetics, *Sphenarium purpurascens,* 423
Decodon verticillatus, genetic load, inbreeding, inbreeding depression, natural selection, self-fertilization, 952
molecular evolution, natural selection, neutral-allele theory, overdominance, point process, SAS-CFF, substitution process, underdominance, 1101

Selection—Sexual
aerodynamics, animal flight, long tails, sexual dimorphism, sexual selection, wings, 1062
alternative reproductive tactics, breeding success, density, hatcheries, natural selection, *Oncorhynchus* kisutch, salmon, sexual dimorphism, sexual selection, 637
amphibians, animal reproduction, fitness, life history, quantitative genetics, sexual selection, 1286
blackbirds, costs, galliformes, raptors, sexual selection, shorebirds, waterfowl, 671
body size, costs of reproduction, maturation, natural selection, sexual dimorphism, sexual selection, snake, *Vipera berus,* 1389
copulation, courtship, cryptic female choice, insects, intrageneric variation, sexual selection, spiders, 711
Cordylochernes scorpiodes, lactate dehydrogenase, population divergence, postzygotic isolation, prezygotic isolation, pseudoscorpion, sexual selection, speciation, spermatophore, 1168
divergence, hybrid fitness, premating isolation, reinforcement, reproductive character displacement, secondary contact, sexual selection, speciation, 1451
Drosophila melanogaster, heritable variation, mat-

ing discrimination, mating speed, sexual selection, 112
extrapair paternity, female choice, polygyny, sexual dichromatism, sexual selection, sperm competition, 1089
foraging cost, handicap principle, *Hirundo rustica*, mate choice, reliable signaling, sexual selection, tail ornament, 1676
handicap principle, mate choice, runaway, sexual characters, sexual selection, 853
sexual imprinting, sexual selection, speciation, 477
sperm competition, sperm displacement, sperm precedence, 758

Senescence
age-specific mortality, *Callobruchus maculatus*, genetic variation, senescence, 1371
life tables, mammals, senescence, 509

Sex
ants, queen-worker conflict, relatedness asymmetry, sex ratio, sociality, 1121
Apterothrips apteris, *Erigeron glaucus*, evolution of sex, herbivores, local adaptation, 465
Chlamydomonas, parasitic DNA, sex, transposons, 1406
experimental manipulation, floral morphology, floral gender expression, genetic correlation, heritability, hummingbird pollination, mechanism of selection, pollen receipt, sex allocation, 55
sexual imprinting, sexual selection, speciation, 477

Variation—Genetic
adaptation, character mapping, hypothesis tests, homoplasy, phylogeny, 172
age-specific mortality, *Callobruchus maculatus*, genetic variation, senescence, 1371
allometry, biomass, organic shape, 44
allometry, Darwin's finches, evolutionary potential, genetic constraints, genetic correlations, heritabilities, hybridization, mutation-selection balance, polygenic variation, 297
allopatry, dispersal, distributional overlap, peripheral isolation, phylogeny, sympatry, vicariance, 490
allopolyploidy, *Asplenium*, colonization, Hawaii, long-distance dispersal, speciation, 1364
allozymes, Australia, *Daphnia*, dispersal, founder effects, hybridization, speciation, zooplankton, 1333
amphibian, Anura, *Hyla versicolor* complex, mitochondrial DNA, polyploidy, speciation, tree frogs, 898
amphibian, development, environmental heterogeneity, food, genetic variation, growth, phenotypic plasticity, reaction norm, *Scaphiopus*, temperature, toads, trade-off, 1773
angiosperms, diversification, geographical distribution, growth form, life-history flexibility, pollination, seed dispersal, speciation rate, species richness, 1619
ants, eusociality, genetic variation, Hymenoptera, polyandry, polygyny, social insects, 694
assortative mating, chloroplast DNA, cytonuclear, disequilibria, hybrid zone, Louisiana irises, RAPDs, RFLPs, selection, 1946
asteraceae, *Erigeron annuus*, fitness, genetic variation, genotype-by-environment interaction, heterogeneous environments, spatial autocorrelation, 1607
biochemical heterozygosity, morphologic variation, *Papio hamadryas hamadryas*, population genetics, 1211
biogeography, *Ensatina eschsholtzii*, gene flow, multidimensional scaling, phylogenetics, proteins, ring species, speciation, taxonomy, 876
bird, Caribbean region, *Coereba flaveola*, genetic divergence, genetic diversity, historical biogeography, mtDNA, RFLP, West Indies, 1041
Cecropia obtusifolia, demographic genetics, gene flow, genetic buffering, genetic structure, genetic variation, seed-bank genetics, seed dispersal, 437
chloroplast-DNA variation, evolution, *Pinus*, species hybridization, 1020
congener, *Echinacea*, genetic variability, population genetic structure, 180
Cordylochernes scorpiodes, lactate dehydrogenase, population divergence, postzygotic isolation, prezygotic isolation, pseudoscorpion, sexual selection, speciation, spermatophore, 1168
cricket, environmental variability, genetic variance, *Gryllus pennsylvanicus*, heritability, life-history characters, 1637
crypsis, gene flow, genetic variation, habitat heterogeneity, host specialization, isolation by distance, multiple-niche polymorphism, natural selection, spatial scale, *Timema cristinae*, 1866
cytochrome *b*, cytochrome oxidase, direct sequencing, dispersal biogeography, *Gallotia* lizards, island colonization, mitochondrial DNA, nuclear DNA, PCR, RAPD, restriction-fragment-length polymorphisms, 12s rRNA, 230
diallel experiment, environmental maternal effects, environmental paternal effects, genetic maternal effects, genetic paternal effects, pollen-selection hypothesis, *Solidago altissima*, 1525
divergence, hybrid fitness, premating isolation, reinforcement, reproductive character displacement, secondary contact, sexual selection, speciation, 1451
Drosophila melanogaster, heritable variation, mating discrimination, mating speed, sexual selection, 112
epistasis, interdemic selection, migration, population structure, shifting balance, 69
fertilization barrier, hybrid zone, reproductive isolation, speciation, sperm competition, 705
gametic compatibility, *Patiriella*, reproductive isolation, 564
gene flow, genetic divergence, morphological divergence, morphotypes, recolonization, variation, 530
geographic variation, hybridization, phylogeography, speciation, species limits, 96
sexual imprinting, sexual selection, speciation, 477

Variation—Phenotypic
adaptation, genotype-by-environment interaction, phenotypic plasticity, sticklebacks, trophic morphology, 1723
allometry, Darwin's finches, evolutionary potential, genetic constraints, genetic correlations, heritabilities, hybridization, mutation-selection balance, polygenic variation, 297

amphibian, development, environmental heterogeneity, food, genetic variation, growth, phenotypic plasticity, reaction norm, *Scaphiopus*, temperature, toads, trade-off, 1773
Bacillus subtilis, compensatory evolution, fitness, mutation, pleiotropy, resistance, rifampicin, 81
body size, *Drosophila melanogaster*, phenotypic plasticity, temperature, 1269
bryozoa, genetic drift, heritability, *Metrarabdotos*, mutation, natural selection, phenotypic evolution, quantitative genetics, stabilizing selection, 360
canalization, *Drosophila*, fitness sensitivity, natural selection, 1438
Chorthippus parallelus, crossing experiments, epistasis, Haldane's rule, hybrid zone, testis dysfunction, 392
Daphnia magna, developmental noise, heterozygosity, phenotypic plasticity, 1715
developmental noise, quantitative-genetic model, selection, 1478
diallel experiment, environmental maternal effects, environmental paternal effects, genetic maternal effects, genetic paternal effects, pollen-selection hypothesis, *Solidago altissima*, 1525
environmental effects, fitness, heritability, *Hirundo rustica*, morphological variability, repeatability, secondary sexual characters, 658
